

Stay Safe. Do Good. Shut the Hood

Did you know that if the average fume hood is left in the highest ventilation stance, it uses the same amount of energy as **3.5 households per year?**

And that of the over 1600 fume hoods on the WUR campus, more than **80%** is permanently in the **highest ventilation stance?**

By shutting our fume hood when not in use, together we can save an amount of energy equivalent to **1500 households per year!**

Besides the energy saving potential, shutting the hood also **improves safety**. With a closed window hood, chemicals are less likely to escape!

Together we can make a change! Stay Safe. Do Good. Shut the Hood.
